

CSE 115A – Test Plan and Report

This document defines how teams must plan, execute, and report testing for their project. All tests must be traceable to user stories and acceptance criteria.

Testing Approach & Expectations

It is strongly recommended that all backend APIs be covered using automated tests integrated with a CI/CD pipeline. Learn more about CI/CD here: <https://github.com/resources/articles/ci-cd>

If automated testing is not used, manual testing must be performed with steps clearly documented and results reported as Pass or Fail.

If UI testing is performed, screenshots must be included as evidence.

System Test Scenarios

User Story ID	Scenario Name	Steps (Input / Action)	Expected Output	Result
US-01	Create Account	1. Open app and select 'New User' 2. Enter name and password 3. Submit form	Account is created and verification message is shown	Pass / Fail
US-02	View Locations	1. Select 'View locations within 5 miles' 2. Allow location access	Map displays all locations within 5-mile radius	Pass / Fail

Unit and Integration Tests

Test Type	Location / Directory	Description	Status
Unit Tests	src/tests/auth/	Tests for account creation, validation, and error handling	All Pass / Some Fail
Integration Tests	src/tests/api/	API-level tests covering core user workflows	All Pass / Some Fail
